### Efficient quality assurance with TubeInspect

Application areas:

- Optical tube inspection system and programmable optical gauge
- Set-up and correction of bending machines
- Reverse Engineering and inspection of sample tubes
- Automatic 100% inspection in a robot cell

How TubeInspect works:

The measuring system merely requires that the tube to be measured is placed in the optical measuring cell. TubeInspect measures the tube's geometry in a few seconds with the help of high-resolution digital cameras, checks gauge fit and provides online corrections to bending machines.

### Cooperation request

We are looking for integrators for our 3D measuring system TubeInspect.

### Facts & data

- Company founded in 1990
- Today approx. 30 employees
- Company strategy is oriented towards development, manufacturing and sales of optical 3D measurement systems
- Majority of clients from automotive and aerospace market
- Worldwide sales representatives
- ISO certified
